

About the course

The upper limb trauma course is now in its 6th year and was significantly expanded in 2014 in line with feedback from previous courses to cover even more breadth and depth.

Aimed at Consultant revalidation and senior trainees, the faculty are all clinicians experienced in trauma care who teach nationally and internationally in their subjects. The surgical faculty has been expanded to include paediatric and plastic surgeons as well as colleagues from anaesthetics and therapy to give a holistic overview of the subject.

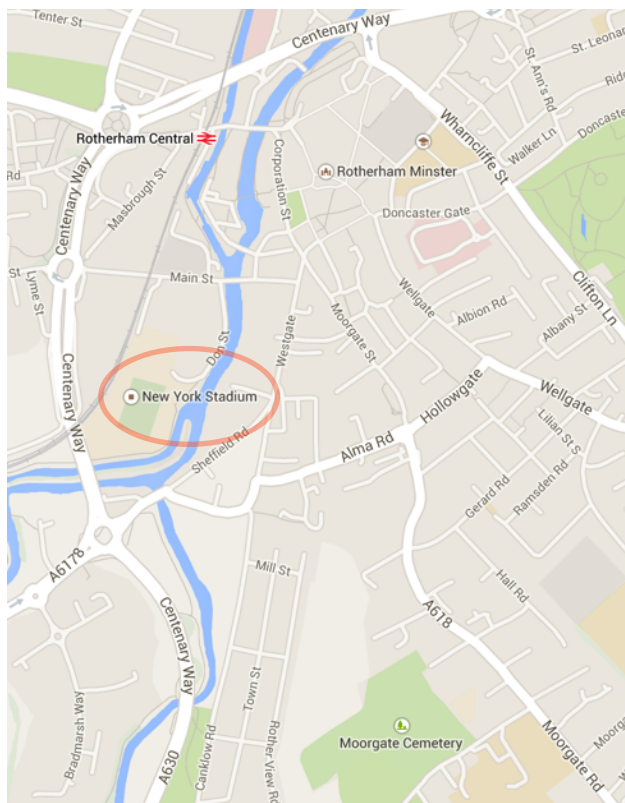

Running over one and a half days, the course mixes lectures with practicals and seminars.

11 CME points were allocated by the BOA to reflect the expanded course last year and a similar accreditation has been applied for in 2015.

Contents

A mix of practical sessions, lectures and seminars including:

- **Shoulder girdle fractures and dislocations**
- **Dislocations and fractures around the distal humerus and elbow**
- **Forearm and wrist injuries**
- **Covers both paediatric & adult injuries**
- **Anaesthesia and rehabilitation for upper limb trauma**
